

Mini Project 5: AI Research Assistant

Explanation

The AI Research Assistant is designed to collect, summarize, and organize research information. It helps users quickly understand and manage large amounts of research data.

Features

- Research note management
- Information collection
- AI summarization
- Keyword extraction
- Topic categorization
- Search functionality
- Resource organization
- Dashboard analytics

AI Tools Used

- ChatGPT – Summarization logic
- Perplexity AI – Research gathering
- Claude AI – Content analysis
- Google Gemini – Research assistance

Workflow

1. User enters research topics.
2. Research information is collected.
3. AI summarizes content.
4. Important keywords are extracted.
5. Information is categorized and stored.

Benefits

- Saves research time
- Improves information organization
- Enhances understanding of complex topics
