

MINI PROJECT 8: AI Knowledge Repository

Description:

The AI Knowledge Repository is a centralized platform for storing, organizing, and retrieving AI-generated knowledge artifacts such as notes, reports, summaries, and research findings. It helps users manage information efficiently and access relevant content through intelligent search.

Features

- Store AI-generated documents
- Intelligent search functionality
- Categorization and tagging system
- Knowledge retrieval dashboard
- AI-based content recommendations
- Version management support
- Secure data storage
- Responsive UI design

AI Tools Used

- ChatGPT – Content generation and organization
- GitHub Copilot – Development assistance
- Google Gemini – Knowledge categorization ideas
- Notion AI – Knowledge management inspiration

Workflow

1. User uploads or creates knowledge artifacts.
2. Data is stored in the repository.
3. AI analyzes and categorizes content.
4. Metadata and tags are generated automatically.
5. Users search and retrieve information easily.

Benefits

- Centralized knowledge storage
- Faster information retrieval
- Better content organization
- Improved collaboration and learning
