

MINI PROJECT 9: AI Learning Analytics System

Description:

The AI Learning Analytics System is designed to analyze student learning activities and provide insights through visual dashboards. It tracks study patterns, performance, engagement, and progress to help learners make data-driven improvements.

Features

- Learning activity tracking
- Performance analytics dashboard
- AI-generated learning insights
- Progress visualization charts
- Skill assessment reports
- Personalized improvement suggestions
- Goal tracking system
- Responsive dashboard design

AI Tools Used

- ChatGPT – Insight generation and reporting
- GitHub Copilot – Coding support
- Google Gemini – Analytics recommendations
- Power BI AI Features – Data visualization inspiration

Workflow

1. Learning activities are recorded.
2. Data is collected and processed.
3. AI analyzes performance trends.
4. Insights and recommendations are generated.
5. Results are displayed through visual dashboards.

Benefits

- Better understanding of learning behavior
- Data-driven decision making
- Improved academic performance
- Effective progress monitoring

9. AI Learning Analytics System

Problem Statement: Create a system to analyze and visualize learning activities assisted by AI.
